

Industrial

At Angle Ring, we become a key part of the supply chain for many industrial projects that require high value, high quality bending and fabrication work.

Our tube manipulation, induction bending, press braking and plate rolling services can be applied to a vast range of specialist materials that are required for heavy fabrications across diverse sectors such as Energy, Offshore and General Engineering markets.

Materials such as specialist alloys, and wear, abrasion, and heat resistant steels, can be processed to exacting customer specifications, meeting industry requirements for quality and durability.

We can bend:

- Tube
- Plate
- Cylinders
- Abrasion Resistant Material

Projects we have worked on:

- Pressure Vessels
- Heat Exchangers
- Petrochemical
- Pharmaceutical
