

Welding and Fabrication

At Angle Ring, we operate to the highest possible standards when it comes to offering an all-round, quality service to our customers.

Trust and reliability are key factors when it comes to choosing a supplier, so achieving our BS EN ISO 3834-2:2021 welding qualification means we can provide added value welding and fabrication services to reduce the need for our customers to have to go to multiple suppliers for additional services.

To complement our plate rolling and plate forming operations, our welding services enable us to re-roll to tight tolerances, and join tubes with full penetration circumferential welds, to achieve longer lengths.

All our Submerged Arc, Plasma, MIG and TIG welding procedures, and our welders themselves, are coded to the latest British and American standards, meaning pipe and tube can be fully welded to approved procedures for added quality and peace of mind.

We can also offer cutting to length, edge or end prepping, cutting, drilling, fabrication, and machining services to add further value to wider customer requirements.

Welding & Fabrication are suitable processes for the following market sectors:

- Architectural & Construction
- Civils
- Defence
- Energy
- Industrial
- Manufacturing
- Offshore
