

Civils

At Angle Ring, we offer a comprehensive range of section bending solutions for bridges, tunnel arches, building foundations, quarries, and mines, from thick plate forming to universal columns, universal beams and rolled steel joists.

As we specialise in rolling and welding large diameter cylinders in carbon and stainless steels, we can provide a wide range of products to civil and environmental projects, as well as the water, marine and geotechnical industries.

Our extensive experience of working to the exacting specifications demanded by the industry enables us to offer a high quality, dedicated service to both end users and sub suppliers, either on completely new projects or as a rapid response to breakdown situations.

We can bend:

- Plate
- Columns
- Beams
- Rolled Steel Joists
- Tubular Pilings
- Pipe
- Circular Cofferdams
- Cutting Rings
- Tunnel Supports
- Railings
- Piling Casings
- Rectangular & Square Hollow Sections

Projects we have worked on:

- Infrastructure
- Highways
- Rail
- Quarrying & Mining
